They hope to start foundations in April.

Dennis,

I agree that we should landfill as much as possible onsite. If we decide to do analyses, who should pay for them? The lead can be done here, but the PCB's will have to be done offsite. When is this work planned to take place?

Okey

Okey,

Please work with Nils on disposing of this soil. If for some reason we need to send it off site, get Jim Gibson involved.

The only potential issue I can think of is the low levels of PCB's in the soils, and also the need to look for lead based on the amount of oil there.

Because the PCB's are at low enough levels to not be regulated, I don't know that the extra expense of off site disposal is justified. (We need to perhaps confirm our data.) Fred, do you agree?

Alex Sabota from Praxair was in yesterday to go over the nitrogen unit upgrade with the construction manager. We went over some of the changes that they plan to make, and Paul and I looked at how we will provide them power supplies from sub J.

Alex had a few questions that I need to pass along. Dennis, please confirm #1 and #2?

1. They will be removing some soil for new foundations and need to know what to do with it. They may have around 3 around 3 dump trucks. I told him that we would probably want to landfill it here, or find another location where we can use it.

2. What should they do with their scrap from the contractors (i.e. daily clean up material, packaging)? I said that we could probably landfill that for them too, but I wasn't sure. This is different than a contractor doing a job for us.

3. Do we have an up to date set of contractor rules to send them?

Jim, I think that purchasing sends these out. Will you please take care of sending a copy out to:

Alex Saboda  
175 East Park Drive  
Tonowanda, NY 14151-0044

John, we discussed our safety position with regard to their contractors. I told them that I didn't feel that it was our place to be responsible to watch their people, or to say anything to them. They have their own safety guidelines and I would expect them to be responsible for seeing that they are followed. They said that their practice is to follow their safety practices, or the buyers, whichever is more stringent, and asked that if we see something that we feel is unsafe that we bring it to the attention of the responsible Praxair individual on site.

I hope that this clarifies the brief discussion on this matter that we had on Friday.

Nils
